# THE ULTIMATE TEST CREATION & ASSESSMENT PACKAGE

Create a Test was born in 2012, from a teacher's frustration with being increasingly stretched for time and facing growing pressure to individualise his student's learning. He wanted to create a tool which enabled users to build customised tests in minutes and personalised assessments with a click of a button.

Used now by hundreds of schools both in the UK and abroad, Create a Test is expanding into subjects beyond it's initial maths focus including Physics, Chemistry, Biology and Computer Science and continues to evolve to address the needs of classroom teachers.

The key features of Create a Test include: easy and quick customisation of papers and questions for classes and individual pupils; assisted assessment with grading suggestions, mark schemes and machine learning to build papers based on past pupil performance; an ever-growing community of users sharing thousands of questions and papers. All of these features make Create a Test the ultimate package for testing and assessment and an unrivalled means of delivering exam practice for students.

In Brief

Create a Test is a solution for the creation and formative use of assessment papers and worksheets for students aged 5 to 18. Created by teachers for teachers, it exists to make assessment of Maths and Science quicker, easier and more effective.

Now in its fifth year, Create a Test provides a resource of over 12,000 questions to over 1,000 registered users in over 50 countries worldwide.
